

SCALELAB AI × SOUTH-WEST ROOF RESTORATION

A Performance-Based Outreach System for Generating More Cedar Roof Estimates

ScaleLab AI will build and operate a targeted outbound email system designed to identify relevant property decision-makers, start qualified conversations, and convert interest into booked cedar roof restoration estimates.

30-DAY INITIAL PILOT

Prepared for southwestroof.ca

PREPARED BY	PREPARED FOR	DATE	DOCUMENT
ScaleLab AI	South-West Roof Restoration	September 2026	Commercial outreach proposal

01 THE OPPORTUNITY

Turning a Specialized Roofing Service Into a Predictable Outbound Offer

South-West provides a specialized service that can help cedar-roof property owners maintain and restore existing roofing instead of immediately replacing it. That positioning — restoration as a serious alternative to premature replacement — is a clear, relevant outbound offer.

This campaign will not rely on emailing random homeowners. Outreach will focus on relevant B2B decision-makers and organizations that own, manage, or influence multiple properties. One qualified relationship can potentially expose South-West to a portfolio rather than a single household.

01

Specialized Service

Cedar restoration is specific enough to build highly relevant outreach around — not a generic “we do roofs” pitch.

02

High-Value Problem

Roof restoration sits next to an expensive property-maintenance decision. The conversation is worth having when the timing is right.

03

Portfolio Buyers

Property and strata managers can oversee multiple relevant properties, so one qualified relationship can open more than a single household.

02 TARGET AUDIENCE

Who We Will Target

Targeting will prioritize organizations where cedar roofing is reasonably relevant to the properties they manage — not a broad blast to every property contact in the region.

PRIMARY SEGMENT

**Strata &
Property**

SECONDARY SEGMENTS TO TEST

- Commercial property management companies
- Building / facilities managers

Management Companies

These accounts often sit closest to maintenance decisions across multiple buildings. When cedar is part of the portfolio, a single conversation can be more valuable than a one-off homeowner inquiry.

EXAMPLE TITLES

- Strata Manager
- Senior Strata Manager
- Property Manager
- Senior Property Manager
- Director of Property Management
- Operations Manager
- Owner / President

- Roofing or exterior contractors that do not specialize in cedar restoration
- Property-focused referral partners where relevant

QUALITY OVER VOLUME

The goal is not to send thousands of generic emails. The goal is to identify relevant accounts and send personalized outreach to the appropriate decision-maker.

03 HOW THE SYSTEM WORKS

The ScaleLab AI Outreach System

A complete outbound engine — from identifying the right accounts to handing South-West a qualified estimate conversation. ScaleLab operates each of these five steps.

04 THE FUNNEL

From Cold Prospect to Booked Estimate

ScaleLab AI is responsible for generating and qualifying the opportunity up to the booked estimate. South-West remains responsible for performing the inspection, preparing the quote, following up, and closing the project.

SCALELAB AI RESPONSIBILITY

05 DIVISION OF WORK

We Handle the Acquisition System

SCALELAB AI HANDLES

- ✓ Market and account research
- ✓ Prospect list building
- ✓ Decision-maker identification
- ✓ Email infrastructure
- ✓ Campaign setup
- ✓ Email copy
- ✓ AI-assisted personalization
- ✓ Follow-up sequences
- ✓ Deliverability monitoring
- ✓ Reply monitoring
- ✓ Lead qualification

SOUTH-WEST HANDLES

- ✓ Responding to qualified opportunities
- ✓ Site inspections
- ✓ Estimates / quotes
- ✓ Technical roofing questions
- ✓ Customer follow-up
- ✓ Closing the job
- ✓ Service delivery

- ✓ Appointment / estimate handoff
- ✓ Campaign optimization
- ✓ Performance reporting

ScaleLab builds and manages the outbound acquisition engine. South-West focuses on roofing and closing qualified opportunities.

06 EXPECTED TIMELINE

30-Day Pilot Timeline

01 WEEK 1	02 WEEK 2	03 WEEK 3	04 WEEK 4
Build & Prepare	Launch & Gather Data	Optimize	Scale What Works
- Define target market - Build lead lists - Configure campaign - Write outreach sequences - Set up tracking and qualification process - QA campaign before launch	- Begin outbound sending - Monitor deliverability - Review replies - Identify early patterns	- Adjust targeting where needed - Refine copy based on response data - Continue follow-up sequences - Qualify interested prospects	- Continue outreach - Prioritize strongest segments - Evaluate booked estimate volume - Review campaign economics and next-step strategy

Cold outbound compounds over time because follow-ups and replies often occur days or weeks after the first contact. The first 30 days should be treated as both a lead-generation period and a data-gathering pilot.

07 EXPECTED PERFORMANCE

What to Expect

Cold email performance depends heavily on the quality of the target list, the relevance of the offer, deliverability, service area, available market size, prospect timing, follow-up, and South-West’s sales process. None of those variables can be promised in advance.

The ranges below are an illustrative planning framework — not a forecast, and not a guarantee of booked estimates or revenue.

For every **1,000 highly targeted prospects** contacted

Illustrative planning ranges — not guarantees.

The primary objective of the pilot is to establish South-West’s actual campaign conversion data. Once enough outreach has been completed, future projections can be based on real results rather than industry assumptions.

08 ECONOMICS

Simple, Measurable Economics

Actual results will depend on South-West’s average project value and close rate. The advantage of the model is that most of ScaleLab’s compensation is tied directly to generating qualified sales opportunities.

PLANNING ASSUMPTION

Average closed job value

Adjust this to match a typical South-West cedar restoration project. The close counts below are illustrative examples only.

\$ 5000

SCENARIO A	SCENARIO B	SCENARIO C
5 booked estimates	10 booked estimates	15 booked estimates
Technology fee \$450	Technology fee \$450	Technology fee \$450
Performance fees 5 × \$150 = \$750	Performance fees 10 × \$150 = \$1,500	Performance fees 15 × \$150 = \$2,250
Total campaign cost \$1,200	Total campaign cost \$1,950	Total campaign cost \$2,700
If 1 of the 5 estimates becomes a project 1 × \$5,000	If 2 of those estimates close 2 × \$5,000	If 3 close at the average job value 3 × \$5,000
Gross revenue \$5,000	Gross revenue \$10,000	Gross revenue \$15,000
Revenue / campaign spend 4.17×	Revenue / campaign spend 5.13×	Revenue / campaign spend 5.56×

Examples only. These figures show gross revenue divided by campaign cost — not profit, not net margin, and not guaranteed ROI.

09 INVESTMENT

Performance-Based Pricing

South-West does not pay ScaleLab a percentage of job revenue. There is no need to track invoice values or calculate commissions on completed jobs.

\$450

Technology & Campaign Fee

Covers the systems required to launch and operate the campaign:

- Campaign setup
- Outreach infrastructure
- Data and research systems
- Campaign management
- Personalization systems
- Monitoring and optimization

+

\$150

Per Qualified Booked Estimate

ScaleLab is compensated when the outreach system produces a qualified prospect who agrees to a legitimate estimate / inspection conversation.

— No percentage of closed revenue.

— No revenue tracking.

— Simple performance-based billing.

10 BILLING STANDARD

What Counts as a Qualified Booked Estimate?

This definition needs to be clear because billing depends on it. A qualified booked estimate should generally meet all of the following.

COUNTS WHEN ALL ARE TRUE

- ✓ Prospect is within South-West's agreed service area
- ✓ Prospect owns, manages, or represents a relevant property / portfolio
- ✓ There is a legitimate cedar roofing restoration, maintenance, or evaluation need — or credible interest in exploring the service
- ✓ Prospect has authority or meaningful influence over the buying process
- ✓ Prospect agrees to a scheduled call, inspection, site visit, or estimate conversation with South-West
- ✓ Contact information is valid
- ✓ Opportunity originated from the ScaleLab outbound campaign

DOES NOT COUNT

- Spam
- Wrong-number / wrong-person responses
- Job seekers
- Vendors trying to sell South-West something
- Clearly irrelevant inquiries
- Duplicate opportunities already actively being pursued by South-West before the campaign
- Cancellations before any meaningful sales interaction, where appropriate

The final qualification definition should be agreed upon before launch so both parties have a clear billing standard.

11 WHY THIS MODEL

Aligned Incentives

01

LOW FIXED COST

The \$450 technology fee covers the systems required to launch and operate the campaign.

02

PERFORMANCE COMPONENT

The majority of campaign upside comes from ScaleLab producing real booked opportunities.

03

NO JOB-REVENUE TRACKING

South-West does not need to report the value of every completed roof job or calculate commissions.

ScaleLab wins by consistently generating qualified opportunities. South-West wins by turning those opportunities into profitable roofing projects.

12 NEXT STEPS

Ready to Launch the Pilot?

01

Approve proposal

02

Confirm service area and ideal project types

03

Define qualified booked estimate criteria

04

ScaleLab builds the campaign and begins the 30-day pilot

\$450 technology fee + \$150 per qualified booked estimate

ScaleLab AI

Performance-Based Client Acquisition
